Operating System Support for USFE 1.0 & GATE 3.5 Upgrade

With the release of USFE R1.0 Simulation planned for **December 11, 2006**, and Production planned for **February 26, 2007**, the following operating systems will be supported.

For the MISS, the operating system versions supported with USFE R1.0 are:

- MS Windows 2003 Server Service Pack 1
- Sun Solaris 10, HW 03/05 or later

On any workstations, the operating system versions supported with USFE R1.0 are:

- MS Windows XP Professional Service Pack 2
- Sun Solaris 10, HW 03/05 or later (only with Solaris on the MISS)

Please note that as previously announced in Circular 06/2006, support for Sun Solaris 8 ended August 1, 2006. Support for Windows 2000 will continue for Eurex US 1.0 until the new release.

Additionally, for MultiMarket Installations running Eurex, with the release of Eurex 9.0 on **November 13, 2006**, all members or vendors running Eurex US 1.0 in the same

environment will need to upgrade all Eurex US MISS servers and workstations to GATE 3.5 in order to avoid technical issues. Affected Eurex members should refer to Eurex circular 215/06 for more information regarding the GATE 3.5 kit distribution and the connection test schedule.

For additional information please refer to the USFE R1.0 Technical Release notes available in the member section of the USFE website, or contact Member Services at +1-312-544-1144.
