USFE Bandwidth Upgrade from 64kbps to 256kbps

In anticipation of increased quoting traffic and market data dissemination, U.S. Futures Exchange will upgrade its bandwidth from 64kbps to 256kbps for member connections. Quadrupling the existing bandwidth will generate greater capacity for the trading system.

Please note that this is an optional but highly encouraged upgrade. All current connections will remain active in the USFE trading environment. There will be no installation charge for the upgrade, and all current line fees will remain unchanged.

Soon, USFE will send out an individual letter, detailing the status of the migration and any necessary steps to be taken by each participating USFE member. We kindly ask each member choosing to upgrade its connection for timely implementation of all migration steps.

If you have any questions or request further information, please contact the Member Services Team at +1-312-544-1144 or e-mail usfe-support@usfe.com.
