Eurex US 1.0 Production software update for Foreign Currency (FX) Futures

On September 14, 2005 Eurex US will publish the Eurex US 1.0 Production software update for FX futures. The update will be dispatched to the production transfer directories of all Eurex US members via FTP between September 14, 2005 and September 16, 2005.

In order to be able to trade FX Futures in the Eurex US production environment, the software update must be installed.

Eurex US 1.0 Production software update for Foreign Currency (FX) Futures

On September 14, 2005 Eurex US will publish the Eurex US 1.0 Production software update for FX futures. The update will be dispatched to the production transfer directories of all Eurex US members' MISS servers via FTP between September 14, 2005 and September 16, 2005.

The software update can be used from business day September 15, 2005 onwards in the production environment.

All Members, who work with the @X-ceed trading application, must replace the existing "XEUSGUI.jar" module on all MISS servers and workstations which are used to run the @X-ceed application in the production environment.

The software will be sent to the MISSes via FTP using the "eusnet40" account for production. Please make sure that the account has been set up with the passwords which were provided in the initial customer letter which was delivered individually.

The file transfer will be directed to the following directories.

SUN:

</opt/gate/transferdir/release40/sun> - for the Solaris software
</opt/gate/transferdir/release40/win> - for the Windows software

Windows:

<ftp-rootdir\release40\win> - for the Windows software
<ftp-rootdir\release40\sun> - for the Solaris software

(The <ftp-rootdir> determines the standard directory for FTP transfers for all Windows accounts.)

Please note that it is the participant's responsibility to transfer the software to the workstations. To ensure the successful transfer of the files, please make sure that the MISSes are connected to the EUREX US network from September 14, 2005 04:00 p.m. CST (11:00 p.m. CET) onwards. Please ensure that at least 20 MB free disk space is available in the transfer directories for storing the files.

The "read-me" file containing the installation details will be delivered together with the software update. If you have not received the production software by September 16, 2005 please contact the Technical Helpdesk (Monday - Friday 24 hours service) at +1 312 544-1200 or write an e-mail to technical.helpdesk@eurexUS.com.

In addition to the FTP transfer, the Eurex US 1.0 production software update, the "read-me" file and the PGP signature will be posted in our website's Member Section (www.eurexUS.com -> Member Section -> Software Kits / Eurex US 1.0 Production) from September 14, 2005 onwards.

If you have any problems logging into the Member Section or have any questions, please contact our Customer Support team at +1 312 544-1144 or write an e-mail to: customer.support@eurexUS.com.

In order to update the @X-ceed trading application please proceed as follows:

- i. Make a backup copy of the current version of the "XEUSGUI.jar" file prior to replacement so that it can be restored in the event of unforeseen problems with the new version.
- ii. Decompress the appropriate archive (eurexusr10_upd4_hf20050914.zip for Windows 2000/XP or eurexusr10_upd4_hf20050914.tar.Z for Sun Solaris).
- iii. To apply the update for Sun Solaris or Windows, please replace the following file with the new version:

Windows: <Gate_Drive:>\opt\gate\base90\XEUS\GUI\lib\XEUSGUI.jar
Sun Solaris: /opt/gate/base90/XEUS/GUI/lib/XEUSGUI.jar

For Sun Solaris systems please ensure the owner and file privileges match the original.

- iv. After restarting the @Xceed trading application, open the <Help> directory in the main menu, and click <About>. Please check that the version and build date are displayed as follows:

"Version XEUS10.TRD.02.08 / Date: May 31 2005".

If either the build date or the version number is different from those above, please check that the "XEUSGUI.jar" file supplied has been copied correctly to the correct place in the file system. A transfer of the replacement module, e.g. to a workstation must be done in binary mode.

In case of any problems with the download or any problems with the installation of the replacement module please contact Technical Helpdesk on +1-312-544-1200.
