Operating Systems Upgrade for Sun Solaris and Windows XP

Summary:

Support for Solaris 8 will be extended **until July 31, 2006** for Eurex US Simulation and Production. Please see the attached Circular for details.

Operating System for Sun Solaris and Windows XP

With this Circular we would like to inform members and vendors about the extension of support for Sun Solaris 8 for Eurex US simulation and production.

Since June 13, 2005, the operating systems Sun Solaris 10 and Sun Solaris 8 for Eurex US have been supported in parallel in both the simulation and production environments on MISS servers and workstations.

In order to provide members with sufficient time to upgrade their internal systems, Eurex US will continue supporting Solaris 8 until July 31, 2006.

From August 1, 2006 onwards, Sun Solaris 10 will be the only supported operating system version for Eurex US, since longer support for Sun Solaris 8 will not be possible.

In addition, support for Windows XP SP1/SP1a, which is provided for workstation installations only, will also be extended for Eurex US until July 31, 2006.

Windows 2000 will continue to be supported.

If you have any further questions regarding support for the various operating systems/service packs or should you experience any problems related to installation, please do not hesitate to call the Eurex US Technical Helpdesk at +1-312-544-1200.
